Question	Questioner
Do we need Ubuntu (specific version)?	
shall we bild up the server to the atlas 200 DK ourself?	
the colorazation is already there or we should program it?	
and if it is not there is it our goal to do in the end ? is the pose detect the additional function that depends on the speed of the team mentioned in the slides ?	
should we think up another functions by ourself or there is a topic pool from Huawei?	

Product Vision	Project Mission
<p>The client's vision is to operate a web-based service that allows black and white photos and videos to be uploaded and viewed and downloaded in color. It also aims to improve the quality of the photo/video. The service is to be enabled by pre-trained neural networks and run on Huawei's own hardware.</p>	<p>The goal of the project is to implement a first version of the web server on the Altas 200 DK hardware. This is to receive photos and videos and feed them to the neural network provided for coloring. Afterwards the result shall be displayed. If time permits, a super-resolution network is to be added to the pipeline.</p>
